TOOL EXECUTIONS

98.9%
CACHE HIT RATE

Dataset: Jan–Mar 2026
50 engineers · 5 practices
1,000 sessions

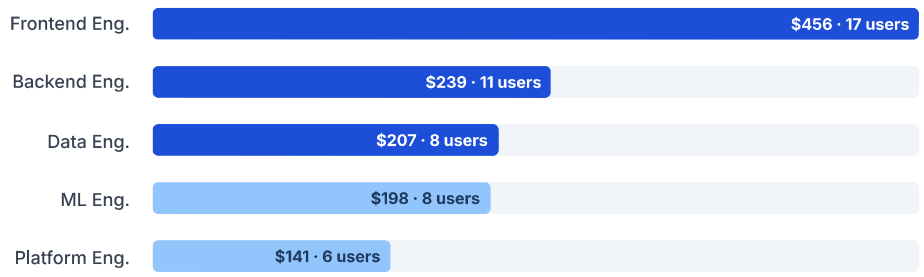
37%

OF TOTAL SPEND

Frontend Engineering

Cost per request is **nearly identical** across all five practices ($0.050–$0.052). Frontend's higher absolute spend reflects higher adoption — not inefficiency. The top 5 users alone account for **$255 (20.5%)** of total spend.

Total spend by practice — $1,241 over 90 days



Eden Chen (Frontend, L4) is the top spender at $59.18 — nearly 5× the team average of $24.81. All top 5 spenders were flagged as Power Users by the KMeans clustering model.

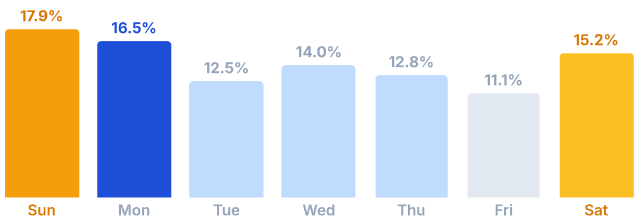
33%

of all requests happen on weekends

Sunday is the busiest day of the week. Friday is the quietest.

Weekend usage (Sat + Sun = 33.1%) outpaces any two consecutive weekdays. This could mean engineers are voluntarily using Claude Code on personal time, or that project deadlines are pushing work into weekends. Either way, it's worth understanding — the data doesn't tell us which.

REQUESTS BY DAY



PEAK HOURS (UTC) — TOP 3 ARE 17:00, 12:00, 16:00

TOOL SUCCESS RATES — ONE OUTLIER

ANOMALY DETECTION · ISOLATIONFOREST

36
anomalous days
out of 720 records

305K
tokens in a single day
(largest spike)

LARGEST SPIKES — JANUARY 2026

Jan 23	Nico Harris	Backend Eng.	305,591 tok
Jan 04	Taylor Garcia	Data Eng.	295,431 tok
Jan 08	Harper Garcia	Frontend Eng.	290,970 tok
Jan 24	Casey Jones	Platform Eng.	254,414 tok
Jan 09	Sam Jones	Frontend Eng.	225,748 tok

> All 36 anomalies occurred in January. No anomalies were detected in February or March, suggesting the team self-corrected or workload stabilised.

USER SEGMENTATION · KMEANS CLUSTERING

Tool-Heavy Users — 82%
41 users · avg 18K tokens/session · ~6.3 tools/request

Power Users — 18%
9 users · avg 33K tokens/session · 1.8× more output

POWER USERS — TOKENS PER SESSION

Sam Jones Frontend	41,420
Eden Chen Frontend	37,755
Harper Garcia Frontend	36,626
Phoenix Martinez Frontend	34,957
Nico Harris Backend	32,243
Rowan Chen Data Eng.	31,713

Three things worth acting on

FINDING 1 → ACTION

Set token alerts for the 9 Power Users

Three engineers hit 290K+ tokens in a single day during January. A simple alert at 150K tokens/day adds zero friction but gives engineering managers visibility before a session inflates monthly spend. The top 5 users already account for 20% of total cost.

Cost control

FINDING 2 → ACTION

Find out why engineers code on Sundays

Sunday is the single busiest day (17.9% of requests). That is unusual and could mean voluntary side projects, deadline pressure, or timezone distribution effects. A short anonymous survey would clarify this — the right management response depends entirely on the answer.

People & culture

FINDING 3 → ACTION

Audit Bash failures — 3,006 failed commands per quarter

Bash is the second most-used tool and the only one below 95% success (93.1%). Pulling error logs and categorising the top failure types would likely surface a small number of fixable patterns — environment issues, path problems, or specific command patterns the model gets wrong.
